Quality and R&D

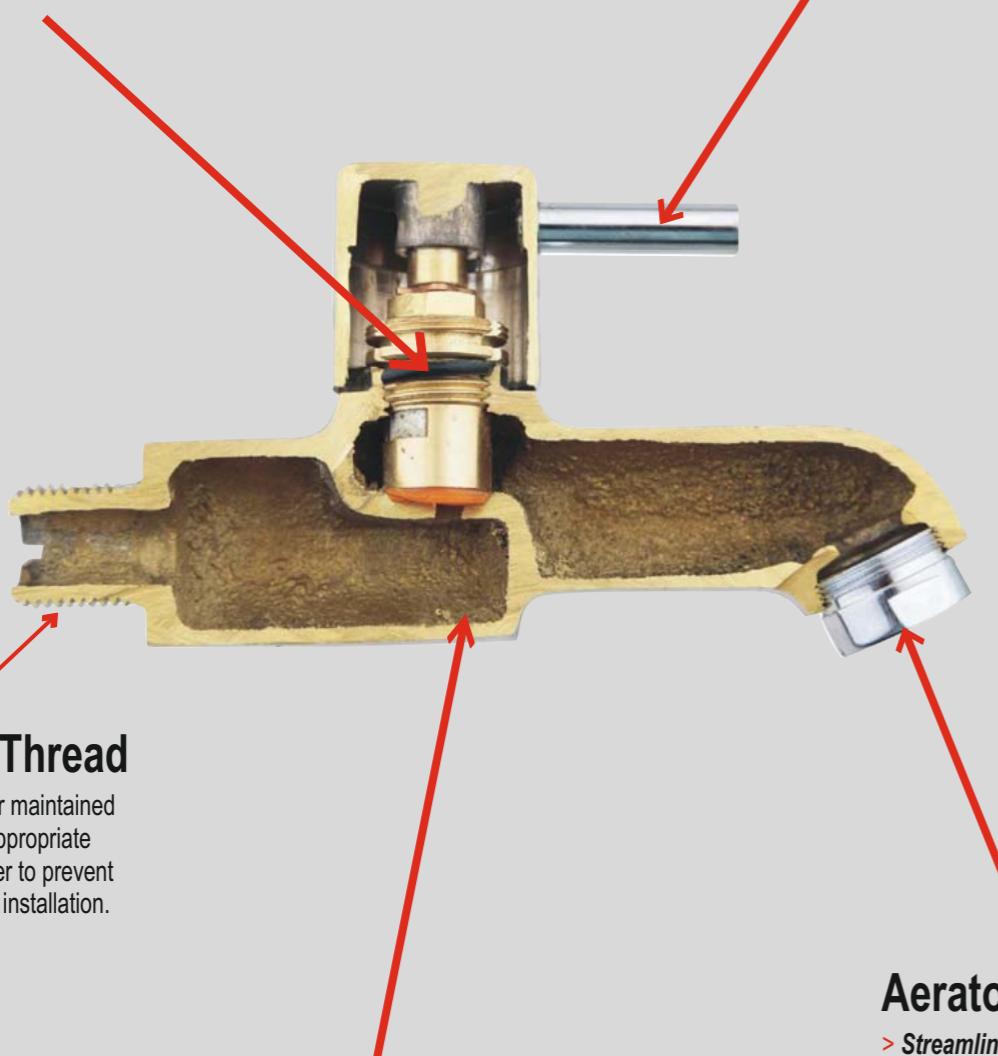

KASHISH has always strived to exceed customer expectations by providing high quality products, continuous innovation & state of art technology to ensure performance and quality. All **KASHISH** products are tested after every production process.

KASHISH's R&D team uses latest instruments & 3D modeling design software to design faucets.

FAUCET TECHNOLOGY

Cartridge

- > Made of high quality virgin brass
- > Responsible for controlling water supply
- > Long and trouble free operating life

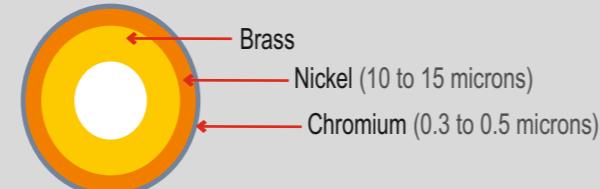

Unbreakable Thread

- > 14 mm of inner diameter maintained at inlet thread to give appropriate thickness to wall in order to prevent breakage at the time of installation.

Faucet Body

- > Solid Brass Construction
- > Made of highest quality brass (copper contents 60% or more)

Chrome Finish

Aerator

- > Streamlined/ Foam Flow
- > Saves Water
- > Prevents water from splashing

MAINTENANCE

Learn How To Clean a TAP

Clean the surface of faucet with mild soap & water. Do not use abrasive sponge or scouring agents for cleaning.

Do not use cleaning agents that contains solvent or acid, household vinegar, acetic acid.

After drying your faucet, you can apply a coat of wax polish to protect the surface from settlement of water.

Learn How To Clean AERATOR

Because of dust, minerals and suspended particles that comes with water, the aerator gets clogged, resulting in low flow of water. The solution is to clean the aerator or to replace it to get streamlined and anti-splash flow of water with reduced consumption of water as well.

First, open the housing by unscrewing it clockwise then take out the aerator.

Wash the aerator with water, clean it and simply attach it again. Do not forget to attach washer back.

Learn How To Solve the Dripping TAP

Another Problem that you would face with the tap is the issue of dripping tap. This issue can sometimes be solved by cleaning the internal fittings.

Firstly open the ABS cap hiding the allen screw on the faucet handle.

Use the allen key to open allen screw inside and remove the faucet handle

Once handle is removed, you will find ceramic disc cartridge. Unscrew it with the help of a spanner by turning it anti-clockwise.

Now remove the rubber washer at the bottom of the cartridge.

Remove the two ceramic discs inside and clean it. Apply little grease on the shiny surface of both the disc.

Now put the ceramic discs and rubber washer back to its place and fit the handle back on the faucet.
